

THE CHALLENGE

Multi-tenant facilities have many components that limit what type of HVAC system can be installed. If the facility is an existing building, there are constraints due to the limited amount of space to accommodate ductwork. If the facility is a LEED building, a high energy efficient system is required. In addition, multi-tenant facilities face many budget restrictions that play a role in the decision.

THE SOLUTION

WaterFurnace horizontal and vertical water source heat pumps provide multi-tenant facilities with an energy efficient and cost effective solution. WaterFurnace offers an extremely comprehensive solution of water source and geothermal heat pumps, varying in size and orientation to accommodate just about any situation. They also provide varying degrees of efficiency to accommodate the owner demands or budget constraints.

Water Source and Geothermal Advantages:

- 100% make up air available
- Single or multi zone vav available
- Industry leading efficiencies
- .5 - 250 ton systems available
- Flexibility for indoors, outdoors; vertical or horizontal

With more geothermal and water source options than anyone else, Jacco has the solution to fit multi-tenant occupancy projects.
