

Firestone High School
Akron, OH

THE PROBLEM

Firestone High School is undergoing many renovations and additions to become a

Community Learning Center for local community members and all sixth through 12 grade students.

An HVAC system needed to be put into place that would be energy efficient while providing optimal control and comfort for the thousands of students that attend.

THE SOLUTION

When complete, the building will be comprised of the following geothermal heat pumps, air handlers and energy recovery units:

- 11 Aeon M2 Energy Recovery Units
- 6 Aeon SA Indoor Air Handlers
- 150 WaterFurnace Envision Heat Pumps
- 8 Aeon Model RN Energy Recovery Units

Aeon units were chosen as a solution for Firestone High School because of the units' semi-custom flexibility to meet tight space requirements. In addition, the units provided the highest energy efficiency to meet the district's requirements.

The addition of these units will allow the Community Learning Center to be energy efficient, maintain a healthy environment and provide increased comfort to students.
